

PURINA SHEEP FEEDS – SOLUTIONS FOR YOUR SUCCESS

LAMB FEEDS – Starters & Growers

LAMB MILK REPLACER (1040)

This 24:24 milk replacer has been specifically designed for newborn lambs. It can either provide the complete milk diet for lambs or be used in situations where lambs require some extra occasional nourishment.

LAMB PRE-STARTER 18% LAS (3283-B)

This multi-particle 18% protein lamb pre-starter is a highly palatable mixture of extruded particles, steamed flaked grains, pellets and molasses. It is designed to be fed free-choice to lambs from 3 days of age until after weaning. It is medicated with Bovatec to help prevent coccidiosis challenges in young lambs. Keep feed fresh and free-choice clean water available to optimize intake.

LAMBENA (3295)

Lambena is a 16% complete pellet. It is recommended that this feed be introduced to lambs after the Purina Lamb Pre-Starter. Lambena is highly fortified with essential minerals and vitamins. It is designed to be fed free-choice from weaning to market weight to ensure rapid weight gain and excellent carcass quality. It can be mixed with on-farm whole grains to achieve the desired final finish.

PUR-A-LAMB B35 (3280)

This 35% protein supplement contains all natural proteins - no urea or animal byproducts. Pur-A-Lamb is a highly fortified supplement that can be used to balance the needs of the entire flock. It is designed to be mixed with on-farm grains to make a 16% grower or a 14% finisher.

EWE FEEDS

EWE CHOW (3297)

This complete 14% pellet has an excellent balance of energy, protein, minerals and vitamins geared for ewes. It is typically fed prior to breeding and in late gestation and early lactation, or as needed to help maintain and/or improve body condition.

SHEEP MINERAL (3440)

A high quality mineral containing no added copper that can be used for the whole flock. Every bag has a blue scoop which equals 28 grams, the typical feeding rate per mature animal per day. Sheep should have access to mineral throughout the year, particularly during breeding, lambing and lactation seasons.

SHEEP MINERAL BLOCK (3141)

Purina's Sheep Mineral Block is an excellent way to ensure that the entire flock receives the proper mineral and vitamin fortification year around. The block is easy to move around and is weatherproof so it can be used on pasture as well.

SHEEP BLOCK (3140)

A weatherproof protein block used to complement pasture and/or hay diets. Ensure that the sheep have consumed pasture and/or hay along with an excellent quality mineral before feeding the block. Provide salt free-choice and ensure proper block location.
